                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >> 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP gatabases can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences wit only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
                Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Separate cDNAs were generated using primers that incorporated unique 5' and 3' tags to distinguish each source of RNA. cDNAs were then pooled, size-fractionated, directionally cloned into a custom medium-copy vector and transformations made with four size classes to minimize size bias. Details of each source of RNA and library

                                                                                                            toxin submit A (LT-A). This protein is used in a method resulting in a mutant LT-A protein which has the wild type Ala residue at position 72 changed to an Arg residue resulting in a toxin which retains its immunogenicity but is detoxified. Detoxification is defined in the specification as a reduction in toxicity relative to wild-type toxin, such that any residual toxicity is sufficiently low to allow use as an effective immunogenic composition in humans without significant side effects. The protein can be combined with an acceptable carrier in immunogenic compositions, optionally comprising an adjuvant and/or a second immunogenic antigen. Such compositions can be administered to prevent/treat disease in a subject e.g. traveller's diarrhoea in humans. The protein or compositions are especially administered as vaccines useful to prevent or treat infections by enterotoxigenic strain of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a gene encoding a protein having a subunit structure of 1A5B in which the DNA sequence encoding each signal is deleted from the A subunit gene and the B subunit gene and they are combined tandemly in the order of (B subunit gene)-(SD sequence gene)-(A subunit gene). A method is provided for the preparation of a protein having a subunit structure of 1A5B in which the above DNA is connected a vector expressible in Brevibacillus chosinensis and Brevibacillus chosinensis is transformed by said vector and said transformant is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cultured. The protein can be used in the preparation of an adjuvant for vaccine. The present sequence represents the E. coli heat labile toxin (LT) A subunit fragment, used for constructing a protein with the subunstructure of 1A5B.
Pig scours vaccine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAN50205 is the gene sequence of the natural LTA gene. The LTA gene the site directed mutant SDMI (see AAN50206) is inactive. The inventors claim a vaccine prepn. active against pig scours which contains an inactivated LTA component, together with additional K88 antigens opt. with whole cells comprising the antigens or contg. the inactivated LTA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                E.coli

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0
```

This synthetic Escherichia coli heat-labile toxin (LT) A subunit (LT-A) is encoded by a plant-codon optimized cDNA. The cDNA sequence contains plant-preferred codons and eliminates sequence motifs associated with spurious mRNA processing. A single codon insertion (GTG encoding valine) was made to accompdate the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of a NcoI restriction site around the wasteless of the creation of the creat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polypeptide or a mutant Vibrio cholerae cholera toxin (CT) A subunit (CT-A) polypeptide, which have reduced enzyme activity as compared to the wild-type LT-A or CT-A polypeptide and where at least one of the codons is altered to a plant preferred codon. The polynucleotide further comprises a nucleic acid sequence encoding LT B subunit (LT-B) or a CT B subunit (CT-B). The polynucleotides are useful for the transformation of plant cells for the production of transgenic plants to produce edible vaccines, especially oral vaccines in transgenic plants for the prophylactic or therapeutic treatment against E. coll or V. cholerae. The mutant polypeptides are also useful as adjuvants.
                                                                                                                                                                                                                                                                                                                                                                                                      (BOYC-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Heat-labile toxin; LT-A; |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CT-A polypeptide and where at least one of the codons is altered to a plant preferred codon. The polynucleotide further comprises a nucleic acid sequence encoding LTB subunit (LT-B) or a CT B subunit (CT-B). The polynucleotides are useful for the transformation of plant cells for the production of transgenic plants to produce edible vaccines, especially oral vaccines in transgenic plants for the prophylactic or therapeutic treatment against E. coli or V. cholerae. The mutant polypeptides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the mature protein, which was caused by a codon change of TCC to AAG in the coding sequence. The sequence ontains plant-preferred codons and eliminates sequence motifs associated with spurious mRNA processing. A single codon insertion (GTG encoding valine) was made to accommodate the creation of a NcoI restriction site around the initiator methionine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              codon. Novel polynucleotides encode a mutant LT-A polypeptide or a mutant Vibrio cholerae cholera toxin (CT) A subunit (CT-A) polypeptide, which have reduced enzyme activity as compared to the wild-type LT-A or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  codon. Novel polynucleotides encode a mutant LT-A polypeptide or a mutant Vibrio cholerae cholera toxin (CT) A subunit (CT-A) polypeptide, which have reduced enzyme activity as compared to the wild-type LT-A or CT-A polypeptide and where at least one of the codons is altered to a plant preferred codon. The polynucleotide further comprises a nucleic acid sequence encoding LT B subunit (LT-B) or a CT B subunit (CT-B). The polynucleotides are useful for the transformation of plant cells for the production of transgenic plants to produce edible vaccines, especially oral vaccines in transgenic plants for the prophylactic or therapeutic treatment against E. coli or V. cholerae. The mutant polypeptides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This is mutant R192G Escherichia coli heat-labile toxin (LT) A subunit (LT-A). The wild-type arginine was replaced with glycine at residue 192 of the mature protein, which was caused by a codon change of TCC to A6G in the coding sequence. The sequence contains plant-preferred codons and eliminates sequence motifs associated with spurious mRNA processing. A single codon insertion (GTG encoding valine) was made to accomodate the creation of a NcoI restriction site around the initiator methionine This is Escherichia coli heat-labile toxin (LT) A subunit (LT-A) double curvant $63K+R192G. The wild-type serine was replaced with lysine at CC residue 63 and wild-type arginine was replaced with glycine at residue CC 192 of the mature protein. The coding sequence contains plant-preferred CC codons and eliminates sequence motifs associated with spurious mRNA CC processing. A single codon insertion (GTG encoding valine) was made to CC accomodate the creation of a NcoI restriction site around the initiator CC methionine codon. Novel polynucleotides encode a mutant LT-A polypeptide or a mutant vibrio cholerae cholera toxin (CT) A subunit (CT-A) cC polypeptide and where activity as compared to the CC vild-type LT-A or CT-A polypeptide and where at least one of the codons CC is altered to a plant preferred codon. The polynucleotide further CC comprises a nucleic acid sequence encoding LT B subunit (LT-B) or a CT B CC subunit (CT-B). The polynucleotides are useful for the transformation of CC plant cells for the production of transgenic plants to produce edible vaccines, especially oral vaccines in transgenic plants for the CC prophylactic or therapeutic treatment against E. coli or V. cholerae. CC more than the produce does not appear in the specification. It was constructed from the wild type LT-A shown in AAY96646 which is given in Figure 1 of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a gene encoding a protein having a subunit structure of IA5B in which the DNA sequence encoding each signal is deleted from the A subunit gene and the B subunit gene and they are combined tandemly in the order of (B subunit gene)-(SD sequence gene)-(A subunit gene). A method is provided for the preparation of a protein having a subunit structure of IA5B in which the above DNA is connected to a vector expressible in Brevibacillus chosinensis and Brevibacillus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    chosinensis is transformed by said vector and said transformant is cultured. The protein can be used in the preparation of an adjuvant for vaccine. The present sequence represents the E. coli mutant heat-labile
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Fig 9-10; 27pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               deleted from the A subunit gene and the B subunit gene and they are combined tandemly in the order of (B subunit gene) (SD sequence gene). (A subunit gene). A method is provided for the preparation of a protein having a subunit structure of 1A5B in which the above DNA is connected to a vector expressible in Brevibacillus chosinensis and Brevibacillus chosinensis is transformed by said vector and said transformant is cultured. The protein can be used in the preparation of an adjuvant for vaccine. The present sequence represents the E. coli heat-labile toxin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                type LT. The substitution of Ser to Tyr at position 63 in LTS63y blocks NAD-binding. Deletion of Glu residues at positions 110 and 112 in LTG61110/112 eliminate the enzymatic activity of LT. The Al subunit of wild type LT catalyses ADP-ribosylation of Gs, a GTP-binding protein that regulates cAMP levels. The resulting increase in cAMP is the cause of diarrhoea in humans and animals e.g. pigs. The mucosal immunogenicities of mutant heat-labile endotoxins LTS63Y and LTdell10/112 were tested. Groups of mice were immunised with LTS63Y or LTdell10/112. The control groups received phosphate buffered saline (PBS) alone. The serum and faecal antibody titres to LT were determined. The results showed that mice immunised with LTS63Y or LTdell10/112 contained high and compared with those immunised with wild-type LT. The LT mutants are useful as a vaccine for preventing and treating diarrhoea and as an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 6; Page 42-44; 48pp; English

The substitution of ser to Tyr at position 63 in LTS63y blocks CNAD-binding. Deletion of Glu residues at positions 110 and 112 in CIT type LT catalyses ADP-ribosylation of Gs, a GTP-binding protein that CC unit type LT catalyses ADP-ribosylation of Gs, a GTP-binding protein that CC regulates cAMP levels. The resulting increase in cAMP is the cause of CC diarrhoea in humans and animals e.g. pigs. The mucosal immunogenicities CC of mutant heat-labile endotoxins LTS63y and LTdell10/112 were tested. CC groups of mice were immunised with LTS63y or LTdell10/112. The control CC groups received phosphate buffered saline (PBS) alone. The serum and CC mice immunised with LTS63y or LTdell10/112 contained that CC mice immunised with wild-type LT. The LT mutants are CC compared with those immunised with wild-type LT. The LT mutants are useful as a vaccine for preventing and treating diarrhoea and as an arth-or activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The wild-type sequence coding for the A subunit of the heat labile toxin (LT-A) of a strain of E.coli known to affect humans (Yamamoto et al, J. Biol. Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutein is not printed in the specification but has been assembled from the full-length wild-type sequence and the description given in the text. (N.B. Amino acid numbering is based on the cholera toxin A subunit sequence).

    useful as vaccines against infection
enterotoxin producing Escherichia coli

Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR4016-R44025). The invention relates to immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutein is not printed in the specification but has been assembled from the full-length wild-type sequence and the description given in the text. Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutain is not printed in the specification but has been assembled from the full-length wild-type sequence and the description given in the text. Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates to immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutein is not printed in the specification but has been assembled from the full length wild-type sequence and the description given in the text. (N.B. Amino acid numbering is based on the cholera toxin A subunit sequence).

Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of

                                                                      The wild-type sequence coding for the A subunit of the heat labile toxin (LT-A) of a strain of E.coli known to affect humans (Yamamotto et al, J.Biol. Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutein is not printed in the specification but has been assembled from the full-length wild-type sequence and the description given in the text. (N.B. Amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              this preferred detoxified mutein is not printed in the specification but has been assembled from the full-length wild-type sequence and the description given in the text. (N.B. Amino acid numbering is based on the cholera toxin A subunit sequence).
                                                                                                                                                                                                                                                                                                                                                                                                                          enterotoxin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     enterotoxigenic bacteria; vaccine; immu protomer A; site-directed mutagenesis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local
                                                                                                   The wild-type sequence coding for the A subunit of the heat labile toxin (LT-A) of a strain of E.coli known to affect humans (Yamamoto et al, J. Biol. Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutchin is not printed in the specification but has been assembled from the full-length wild-type sequence and the description given in the text. (N.B. Amino acid numbering is based on the cholera toxin A subunit sequence).

                                                                                                                                                                                                                                                                                                                                                                   The wild-type sequence coding for the A subunit of the heat labile toxin (LT-A) of a strain of E.coli known to affect humans (Yamamoto et al, J.Biol. Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutain is not printed in the specification but has been assembled from the full-length wild-type sequence and the description given in the text. Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates to immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutein is not printed in the specification but has been assembled from the full-length wild-type sequence and the description given in the text. (N.B. Amino acid numbering is based on the cholera toxin A subunit sequence).
enterotoxigenic bacteria; vaccine; immunogenic
protomer A; site-directed mutagenesis; reduced

Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates immunogenic, detoxified LT-A proteins and their use in vaccines to
                                                                                                                                                                                                                                                                                                                                                                  protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutch is not printed in the specification but has been assembled from the full-length wild-type sequence and the description given in the text. (N.B. Amino acid numbering is based on the cholera toxin A subunit sequence).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 3; Fig 2 and Page 46; 60pp; English.

The sequence was published by Yanamoto et al, J.Biol. Chem., 259, 5037-5044. Mutations at selected positions within this sequence have been found to reduce toxicity (see AAR38730-R38732 and AAR44016-R44025). The invention relates to such immunogenic, detoxified proteins and their use in vaccines to protect against enterotoxigenic E.coli.
                                                                                                                                                                                                                                                     enterotoxigenic bacteria; vaccine; immunogenic protomer A; site-directed mutagenesis; reduced ADP-ribosyltransferase activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The wild-type sequence coding for the A subunit of the heat labile toxin (LT-A) of a strain of E.coli known to affect humans (Yamamoto et al, J.Biol. Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed muttagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutein is not printed in the specification but has been assembled from the full-length wild-type sequence and the description given in the text. (N.B. Amino acid numbering is based on the cholera toxin A subunit sequence).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Immunogenic detoxified mutant cholera toxin and heat labile toxin useful as vaccines against infection by Vibrio cholerae and enterotoxin producing Escherichia coli

Chem., 259, 5037-5044 - see AAQ42768) was subjected to site-directed mutagenesis. Certain mutations were found to reduce toxicity (see AAR38730-32 and AAR44016-R44025). The invention relates immunogenic, detoxified LT-A proteins and their use in vaccines to protect against enterotoxigenic E.coli. The amino acid sequence of this preferred detoxified mutein is not printed in the sequence and the description given in the full-length wild-type sequence and the description given in the text. (N.B. Amino acid numbering is based on the cholera toxin A subunit sequence).
       The wild-type sequence coding for the A subunit of the heat labile toxin (LT-A) of a strain of E.coli known to affect humans (Yamamoto et al, J.Biol.                                                                                                                                                                                This sequence corresponds to the amino acid sequence of the A subunit of the E. coli heat labile toxin, an example of a bacterial ADP-ribosylating toxin. A mutant detoxified form of this protein is used in a parenteral adjuvant composition, which comprises the detoxified protein, at least one selected antigen and optionally a pharmaceutically acceptable (optionally topical) vehicle. The adjuvant composition can be administered parenterally in conjunction with at least one antigen in methods to immunise vertebrate subjects. The adjuvant has the ability to enhance the humoral and cell-mediated immune responses elicited by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A subunit; heat labile toxin; ADP-ribosylation; mutant; detoxification; parenteral adjuvant; antigen; antigen; immunisation; humoral response; cell-mediated immune response; virus; bacterium; parasite; fungus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             specification but has been assembled from the full-length wild-type sequence and the description given in the text. (N.B. Amino acid numbering is based on the cholera toxin A subunit sequence).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 this preferred detoxified mutein is not printed specification but has been assembled from the fu
                      prior/subsequent to the antigen, and is preferably administered within a short space of time to the same site; it can also be administered in isolation from antigens as a boost following systemic or mucosal antigen administration. Most preferably, the adjuvant is co-administered with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best
                                                                              The present invention relates to peptides which exhibit anti-retroviral activity. The peptides of the invention (ANU12559-ANU14009) comprise DP178-like and DP107-like peptides. The DP178 peptide corresponds to amino acids 639-673 of the transmembrane protein gp41 from human immunodeficiency virus 1 (HIV-1) isolate LAI. The DP107 peptide corresponds to amino acids 558-595 of gp41 from HIV-1LAI. The invention also relates to a method of identifying compounds that inhibit the formation of or disrupts a DP107/DP178 complex. The method comprises detecting the formation of a DP107/DP178 complex, both in the presence or absence of a test compound, in a reaction mixture containing DP107 and DP178 peptides. The method is useful for identifying compounds,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          carrier. The antigen may be derived from viruses, bacteria, parasit, and fungi or may be tumour antigens, self-antigens and allergens. The compositions are therefore useful in the treatment and prevention of e.g. viral diseases, allergic manifestations, diseases caused by pathogens (e.g. bacteria or parasites), AIDS, autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (e.g. Systemic Lupus Erythematosus), Alzheimer's disease and cancers The adjuvant can also be used to prepare antibodies against selected antigen(s), useful e.g. for diagnostic purposes or for antigen
              including small molecule compounds, which may themselves exhibit antifusogenic, antivital or intracellular modulatory activity. The DP178-11ke-DP107-11ke peptides are useful to inhibit human and non-human retroviral, particularly HIV, transmission to uninfected cells. The
                                                                                                                                                                                                                                                                                                                                      Identifying a compound that inhibits the formation of or disrupts a DP107/DP178 complex, especially compounds with antifusogenic, antivior intracellular modulatory activity, by detecting the formation of DP107/DP178 complex -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Anti-retroviral; DP178-like; DP107-like; heat labile enterotoxin antifusogenic; antiviral; HIV transmission.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
